                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence is B. thuringiensis (Bt) crystal protein Crylla, the DNA encoding which was muteted to allow cloning of domain III or domains I and II, to make the hybrid protoxins of the invention. The hybrid toxins of the invention, having structural domains I, II and III in this order starting from the N-terminal derived from at least 2 different crystal proteins, are useful for protecting plants against pest insects, e.g. moths, butterflies and Colorado potato beetle or for combating insects

```

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiansis insecticidal crystal endotoxin (CRY) protein. This sequence is used in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel insecticidal proteins obtained from Paccilomyces sp. (see AAB66899 to AAB66801 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

```
The sequence carried on pJH12 which was isolated from B. thurin- giensis strains JHCC4835 and JHCC 4353 (NCIB 40091 and 40090 resp.). The DNA can be used to produce transformants E.coli strain MC12022/pJH12 (NCIB 40278) or bacteriophage EMB14 vector (NCIB 40279) or E.coli strain BL21/pJH11 (NCIB 40275). The delta-endo- toxin produced by the transformants can be used in formulations for combatting Lepidoptera and Coleoptera pests. (Updated on 25-WAR-2003 to correct PA field.) (Updated on 24-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                     Bacillus thuringiensis strains - used for producing an endotoxin for
protecting plants against insects, partic. Lepidoptera and Coleoptera.
 Bacillus thuringiensis; JHCC 4353

resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiens; insecticidal crystal endotoxin (CRY) protein. This sequence is used in the invention

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify enter proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crystal endotoxin (CRY) protein. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EEVPLLPIYAQAANLHILILIRDASIFGKEWGLSSSSISTFYNRQVERAGDYSYHCVKWYS

                                                                     The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       480
     The invention relates to a novel Bacillus thuringiensis cryl gene, gene combination, expression vector, nucleotide sequence of the B thuringiensis cryl gene with high-rexicity to lepidoptera pests and the amino acid sequence of the protein encoded by it, cooperative use of the cryl gene with the expression product of crylab or crylBa, primer sequences for expressing the genes, and the constructed shuttle vector pSX4422b. The gene in combination with the crylab or crylBa genes displays high toxicity to the lepidoptera, coleoptera and diptera pests. The present sequence represents the cryllel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        719

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         480
                                                                                                                                                                                                                                                                                                                                                                                                                                            09
                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                           The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB6689) to AAB66901 and AAB6691). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  QTGIGIAGKILGTLGVPFAGQIASLYSFILGELWPKGKSQWEIFMEHVEEIINQKILTYA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is sequence is used in the invention

GENERAL INFORMATION:

APPLICANT: Cardineau, Guy A.

APPLICANT: Stelman, Steven J.

APPLICANT: Stelman, Steven J.

APPLICANT: Stelman, Steven J.

APPLICANT: Stelman, Steven J.

APPLICANT: Navary Kenneth E.

TITLE OF INVENTION: Plant-Optimized Genes Encoding Pesticidal Toxins
FILE REFERENCE: MA-714XC2D1

CURRENT PELING DATE: 2001-04-05

PRIOR FILING DATE: 1994-10-23

PRIOR PAPLICATION NUMBER: 60/076,445

PRIOR FILING DATE: 1997-11-12

PRIOR FILING DATE: 1998-03-02

NUMBER OF SEQ ID NOS: 27

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 23

LENGTH: 1186

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Appl. Environ, Microbiol. 61:2402-2407(1995).

-i- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
-i- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
epithelial cells of certain coleopteran and lepidopteran species.

Active on Plutella xylostella but non Bombyx mori.

-i- DEVELOPMENTAL STAGE: The crystal protein is produced during
sporulation and is accumulated both as an inclusion and as part of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene.";

Gurr. Macrobiol. 41:65-69(2000).

-!-FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
-!-FUNCTION: Promotes of many lepidopteran larvae. Active on Plutella
epithelial cells of many lepidopteran larvae. Active on Plutella
xylostella and on Bombyx mori.
-!- DEVELOPMENTAL STAGE: The crystal protein is produced during
sporulation and is accumulated both as an inclusion and as part of
